WEATHER SYNOPSIS BY REGION

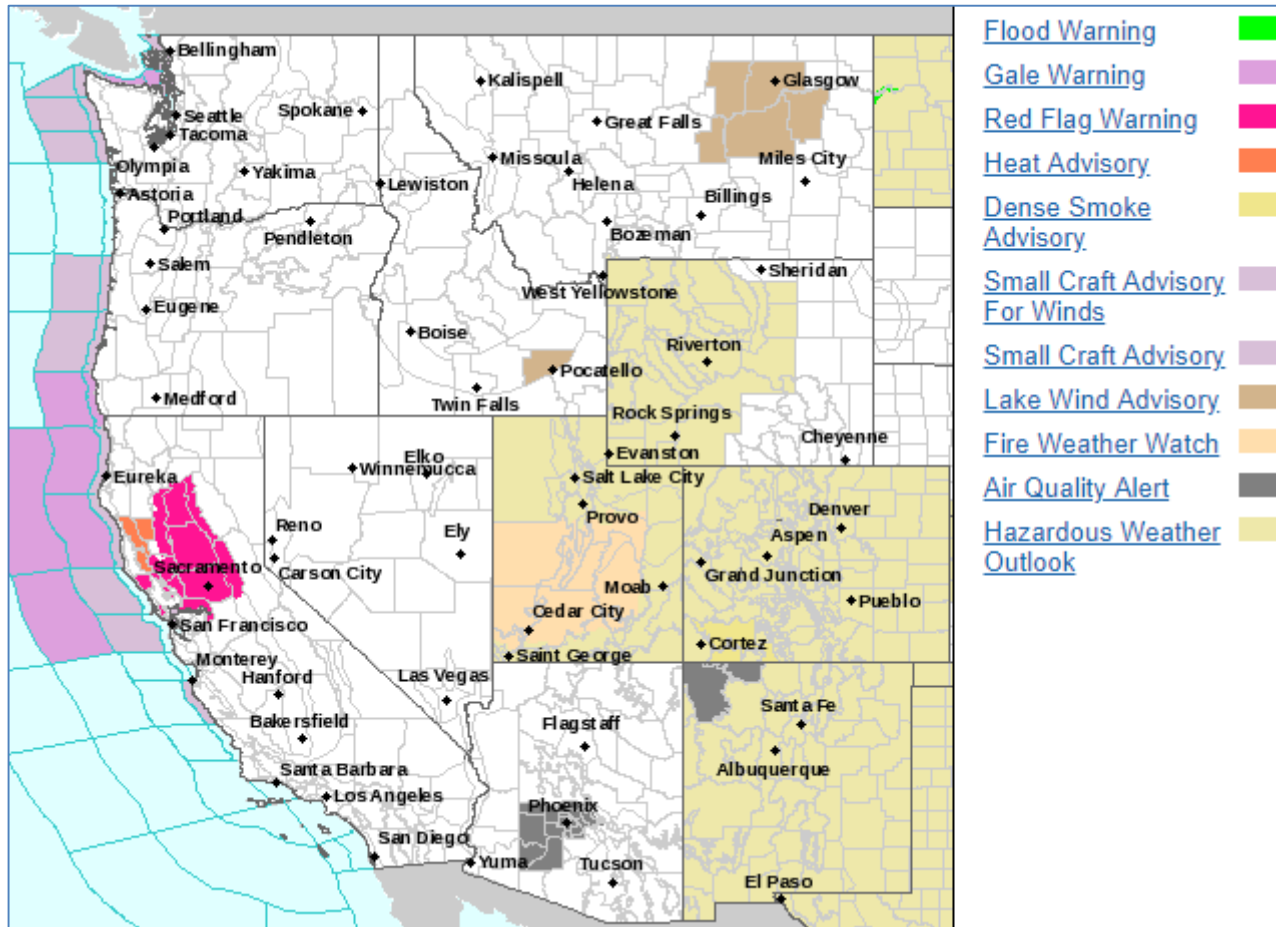

NORTHERN CALIFORNIA

Another hot day is forecast for much of interior Northern California today, 07/01/18. There will be some relief near the Delta as westerly breezes develop. Temperatures will again reach 100 degrees or greater across the Sacramento Valley from Yuba City northward, with 106-108 temperatures projected near Redding. These locations will also encounter locally breezy north winds this morning, then diminishing toward the afternoon. As such, critical fire weather conditions will likely continue through much of today for those more wind-prone areas.

SOUTHERN CALIFORNIA

Moderate to strong onshore flow will keep temperatures at or slightly below seasonal normal through Wednesday. From Thursday through next weekend, high pressure will strengthen over the area. This will bring very hot and dry conditions to the area with record temperatures possible in the Los Angeles area on Friday and Saturday. For southeastern California, very hot weather will return for much of the latter half of the week with most lower elevation communities easily exceeding 110 degrees. Dry conditions will prevail through the Independence Day holiday.
